Prevent Mechanical Presents: Maintenance Tip for Owners and Tenants

MAINTAIN THE DRAIN

Clogged drains can generate expensive service calls. Prevent Mechanical would like to help save Unit Owners and Tenants the inconvenience and expense of unnecessary service calls and help to keep you and our employees safe and isolated by avoiding excessive contacts.

One of the simplest and most cost-effective ways of preventing clogs is to use household vinegar as part of your regular cleaning schedule.

Pour one or two cups of white vinegar down each drain (sink and tub) in your home and let it sit overnight. Then rinse it the next morning with very hot water.

The vinegar helps to break up any sludge that may be accumulating in your drains and the hot water helps to flush it away.

Vinegar is inexpensive, it's eco-friendly and it's not harmful to your plumbing pipes or fixtures. You can do this as often as once-a-week, but just once-a-month will really help to prevent clogs from building up.

If we can avoid making a service call, we'll save you money and help keep everybody safer!

DRIVING DOWN YOUR MAINTENANCE COSTS!
